

A
Project Report On
“Brick Dynamics”

Submitted in Partial Fullfilment of the Requirement
For the Award of Diploma of Engineering
In Computer Engineering of
Gujarat Technological University, Ahmadabad.

Submitted By

Rohit Khushbu Rajubhai	206420307004
Rohit Janvi Rajubhai	206420307005
Chauhan Priyanshi Sandipkumar	206420307010

Gujarat Technological University, Ahmedabad

2022-2023

RMS POLYTECHNIC

CERTIFICATE

This is to certify that the project work embodied in this project entitled “**Brick Dynamics** ” has been carried out by **Rohit Khushbu Rajubhai , Rohit Janvi Rajubhai , Chauhan Priyanshi Sandipkumar , Jingar Akshat Prabhudas** Enrollment No. **206420307004 , 206420307005 , 206420307010 , 206420307021** at **Computer Engineering Department** of **RMS Polytechnic, Vadodara** in Partial Fulfillment of Diploma degree to be awarded by Gujarat Technological University. This Project work has been carried out under my supervision and is to my satisfaction.

Date :-

Place :- Vadodara

Mrs. Sneha Dave
Lecturer,
Computer Engineering
Department,
RMS Polytechnic ,Vadodara

Mrs. Dipixa Rana
H.O.D,
Computer Engineering
Department,
RMS Polytechnic ,Vadodara

ACKNOWLEDGEMENT

First of all, I would like to thank my Guide **Mrs. Sneha Dave** for her guidance through several aspects of the system that only an experience person like her can give. Through her guidance we discovered several new ways of doing the same things, but in a more appropriate and systematic fashion. We thank her deeply.

Secondly, we would like to thank our Head of Department for being there for us whenever we needed her guidance and helping us not only through the project but throughout our whole journey till present.

Thirdly, We would like to thank staff members of Computer Engineering Department, RMS Polytechnic for their guidance and support.

Last but not least we would like to thank our friends, classmates and family members for their support and love throughout this project work.

ABSTRACT

Brick Dynamics Web Application is used to find your dream home online directly from the owner without paying any brokerage. The information regarding property Selling, Buying and Cancellation. The system is very useful for seller which can sell or rent their property at the best price to genuine buyers from their comfort. The seller can advertise their property here.

CHAPTER-1

INTRODUCTION OF PROJECT

1.1 Introduction of Project

1.2 Modules

1.3 Project Definition

1.4 Scope and Objective of Project

1.4.1 Scope of Project

1.4.2 Objective of Project

1.1 INTRODUCTION OF PROJECT

Now Days When everything is Online how is it possible that real estate left web application behind. There are lot of Real Estate Companies who Advertise their Property Online so Purpose behind developing this Application is that their Property can also Sell or Buy Rental Property using this. The User can inform their Admin for regarding Property and update the Information regarding Property and Cancellation of Property or Changing Buyer Choice. The System is very useful for the Companies or Builders that can Post and Edit their Properties and their Personal Info and Admin can monitor records of all of them. These Applications are not widely but in Future we have Large Scope of Growth.

1.2 MODULES

Admin

- Login / Logout
- Manage the System
- View Request
- Approve or Reject Property
- Approve or Reject Advertisement
- Manage Users
- View Feedback
- View Report
- Change & Forget Password

Seller

- Login / Registration
- Request & View Property
- Update Profile
- Advertise Property
- Make a Payment
- Change & Forget Password
- Log out

Landlord

- Login / Registration
- Request & View Property
- Update Profile
- Advertise Property
- Make a Payment
- Change & Forget Password
- Log out

Buyer

- Login/Registration
- Contact Seller
- Search a property
- Wishlist / Add to cart
- Give feedback
- Update profile
- Log out

Tenants

- Login/Registration
- Contact Landlord
- Search a property
- Wishlist / Add to cart
- Give feedback
- Update profile
- Log out

1.3 PROJECT DEFINITION

Brick Dynamics is a web application where you can find your comfort place to stay. This application will find you your dream home online without paying any brokerage. This will focus on the properties that are ready to sell or rent advertisement purpose.

1.4 SCOPE AND OBJECTIVE OF PROJECT

1.4.1 SCOPE OF PROJECT

The Scope of the Our Project "Brick Dynamics" is to enable the buyers to search for property listing Online. The motive of developing this application is to design a feature rich search engine which can make the search of commercial property, rental property & house an easy task. In these days there is a lot of demand of online real estate website so we provide the users with a platform where they can easily find the best available properties and can bid for the property. Currently we are developing a system for only Vadodara purpose but in future scope we can develop a system for All Over India Purpose.

1.4.2 OBJECTIVE OF PROJECT

The System should have a Login . A Login Box should appear When the System is invoked. The Admin should have all the type of Authority. The Admin should maintain Property. Admin identify Property type as it is Residential or Commercial Property. The User can request the Admin for regarding to Property and Update the Information regarding Property and Cancellation of Property or changing Buyer Choice. The User should book the Property for Sell or Rent with detail of Property. The System is very useful for the Builders & Sellers that can post and edit their Properties and their Personal Info and Admin can monitor records of all of them.

CHAPTER-2

PROJECT DESCRIPTION

2.1 Study of problem

2.1.1 Hardware, Software and Device Requirement

2.1.2 Specification Requirement

2.1.3 Backend Technology

2.2 System Analysis

2.2.1 System Model

2.3 System Diagram

2.3.1 Data Dictionary

2.3.2 Diagrams

2.3.2.1 Flowchart

2.3.2.2 E-R Diagram

2.3.2.3 Data Flow Diagram

2.3.2.4 Use-Case Diagram

2.3.2.5 Activity Diagram

2.1 STUDY OF PROBLEM

2.1.1 HARDWARE, SOFTWARE & DEVICE REQUIREMENT

Hardware Requirements

- Processor: Intel core processor
- RAM: 2 GB RAM and Above

Software Requirements

- XAMPP Version:5.6.8
- Notepad++
- Browser: Google Chrome and various other Browsers.

2.1.2 FRONTEND TECHNOLOGY

HTML

The **Hypertext Markup Language (HTML)** is the standard HTML can embed programs written in a scripting language such as JavaScript, which affects the behavior and content of web pages. Inclusion of CSS defines the look and layout of content.

Web browsers receive HTML documents from a web server or from local storage and render documents into multimedia web pages. HTML describes the structure of a webpage semantically and originally included cues for the appearance of the document.

HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page.

HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items.

HTML can embed programs written in a scripting language such as JavaScript, which affects the behavior and content of web pages. Inclusion of CSS defines the look and layout of content.

The World Wide Web Consortium (W3C), maintainer of both the HTML and the CSS standards, has encouraged the use of CSS over explicit presentational HTML since 1997

CSS

Cascading style sheet (CSS) is a style sheet language used for describing the presentation of a document written in a markup language like HTML.

CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of presentation and content, including layout, colors, and fonts.

Separation of formatting and content also makes it feasible to present the same markup page in different styles for different rendering methods, such as on-screen, in print, by voice (via speech-based browser or screen reader), and on Braille-Based tactile devices. CSS also has rules for alternate formatting if the content is accessed on mobile Device.

The CSS specifications are maintained by the World Wide Web Consortium (W3C). Internet media type (MIME type) is registered for use with CSS by RFC 2318 (March 1998). The W3C operates a free CSS validation service for CSS documents.

Java Script

Java script often abbreviated as JS is a high-level, interpreted programming language. It is a language which is also characterized as dynamic, weakly typed, prototype-based and multi-paradigm.

Alongside HTML and CSS, JavaScript is one of the three core technologies of the World Wide Web. JavaScript enables interactive web pages and thus is an essential part of web applications. The vast majority of websites use it, and all major web browsers have a dedicated JavaScript engine to execute it.

As a multi-paradigm language, JavaScript supports event-driven, functional, and imperative programming styles. It has application programming interfaces (APIs) for working with text, dates, regular expressions, standard data structures, and the Document Object Model (DOM).

Although there are strong outward similarities between JavaScript and Java, including language name, syntax, and respective standard libraries, the two languages are distinct and differ greatly in design; JavaScript was influenced by programming languages such as self and Scheme.

2.1.3 BACKEND TECHNOLOGY

PHP

Hypertext preprocessor (PHP) is a server-side scripting language designed for Web development, but also used as a general-purpose programming language.

PHP originally stood for Personal Home Page, but it now stands for the recursive acronym PHP: Hypertext Pre-processor.

PHP code may be embedded into HTML code, or it can be used in combination with various web template systems, web content management systems, and web frameworks.

The PHP interpreter only executes PHP code within its delimiters. Anything outside its delimiters is not processed by PHP, although non-PHP text is still subject to control structures described in PHP code.

The most common delimiters are `<?php` to open and `?>` to close PHP sections. The short ended form `<?` also exists.

MySQL

MySQL is an open-source relational database management system (RDBMS). Its name is a combination of “My”, the name of co-founders Michael Widenius's daughter, and “SQL”, the abbreviation for Structured Query Language.

The MySQL development project has made its source code available under the terms of the GNU General Public License, as well as under a variety of proprietary agreements. MySQL was owned and sponsored by a single for-profit firm, the Swedish company MySQL AB, now owned by Oracle Corporation.

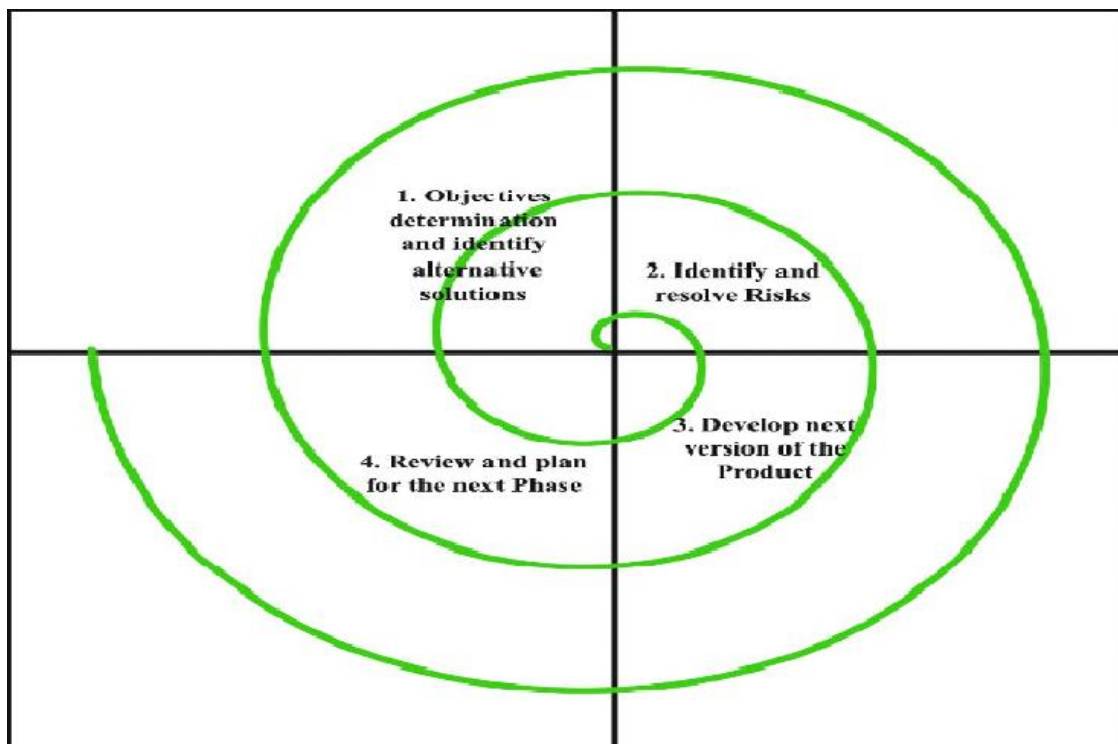

MySQL has stand-alone clients that allow users to interact directly with a MySQL database using SQL, but more often, MySQL is used with other programs to implement applications that need relational database capability. MySQL is a component of the LAMP web application software stack (and others), which is an acronym for Linux, Apache, MySQL, Perl/PHP/Python. MySQL is used by many database-driven web applications, including Drupal, Joomla, phpBB, and WordPress. MySQL is also used by many popular websites, including Facebook, Flickr, MediaWiki, Twitter and YouTube.

2.2 SYSTEM ANALYSIS

2.2.1 SYSTEM MODEL

The spiral model and deterrence model are similar in kind and opposite in substance. Both models attempt to explain the outbreak of war. Both assign a central role to national misperception: specifically, both posit that states adopt war-causing policies in the false expectation that these policies will elicit compliance. However, they posit opposite misperceptions.

Spiral Model

2.1 Spiral Model

We have used this model as our requirements are clear and there will be no further changes in user requirements, even if changes have to be done then it will be easy to do changes using this model. This model is better for small projects.

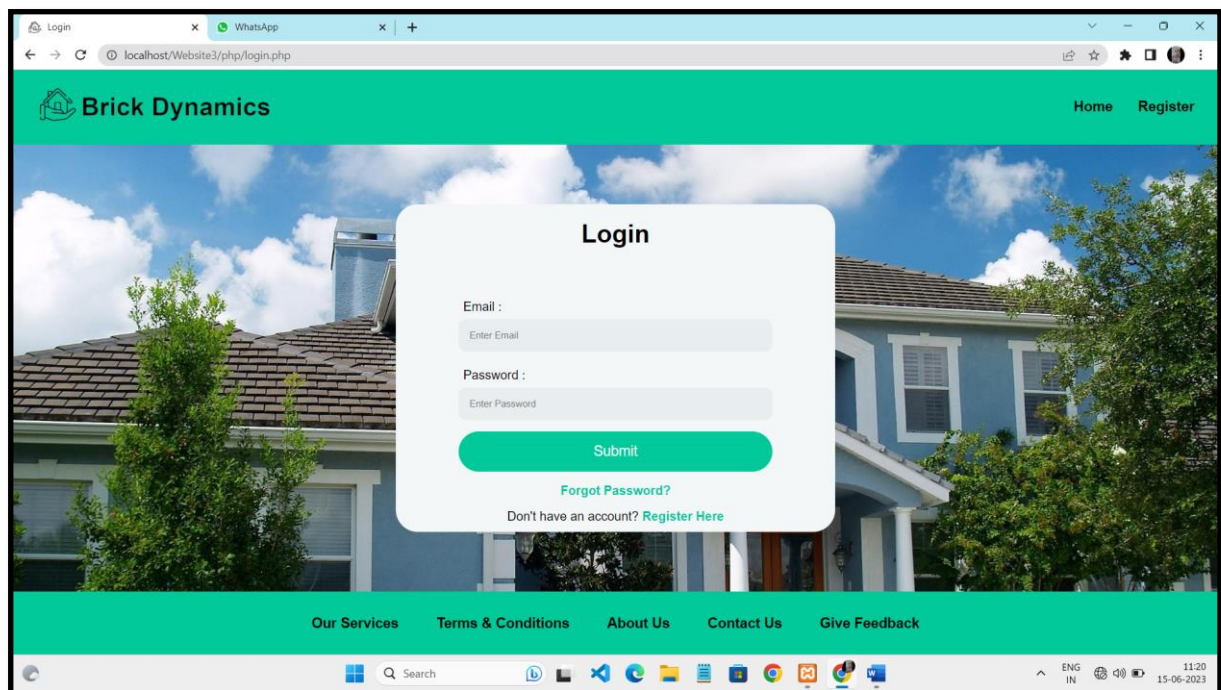

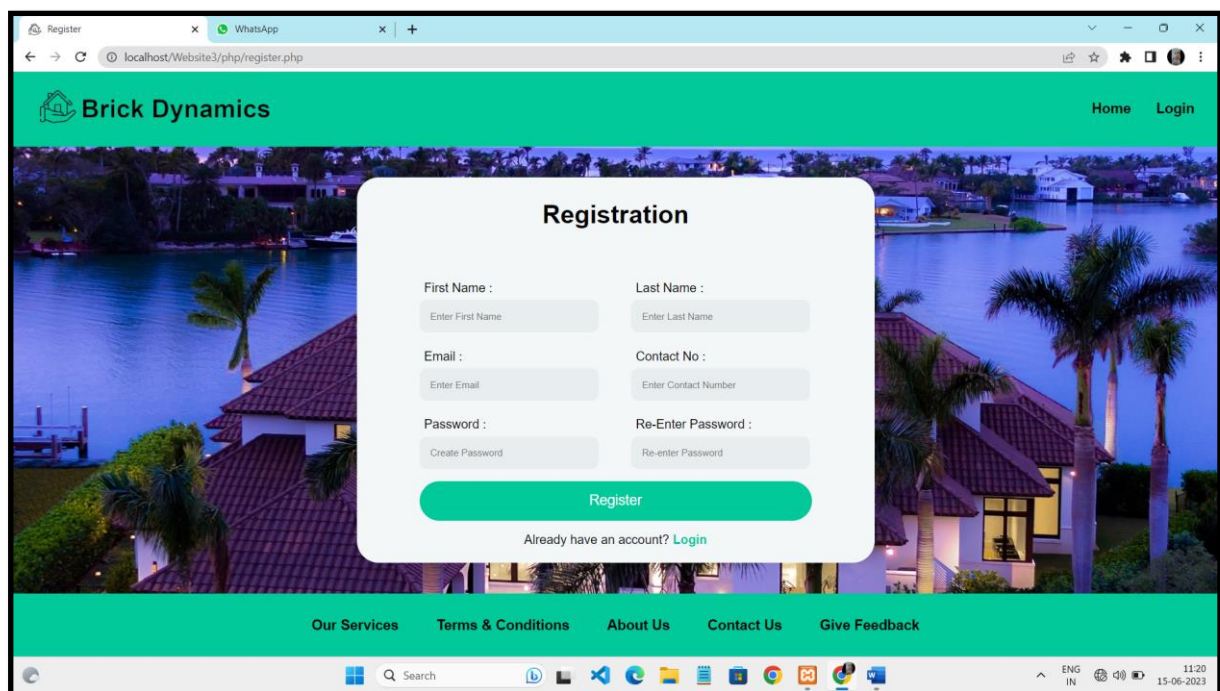

Fig 3.4 Login Page

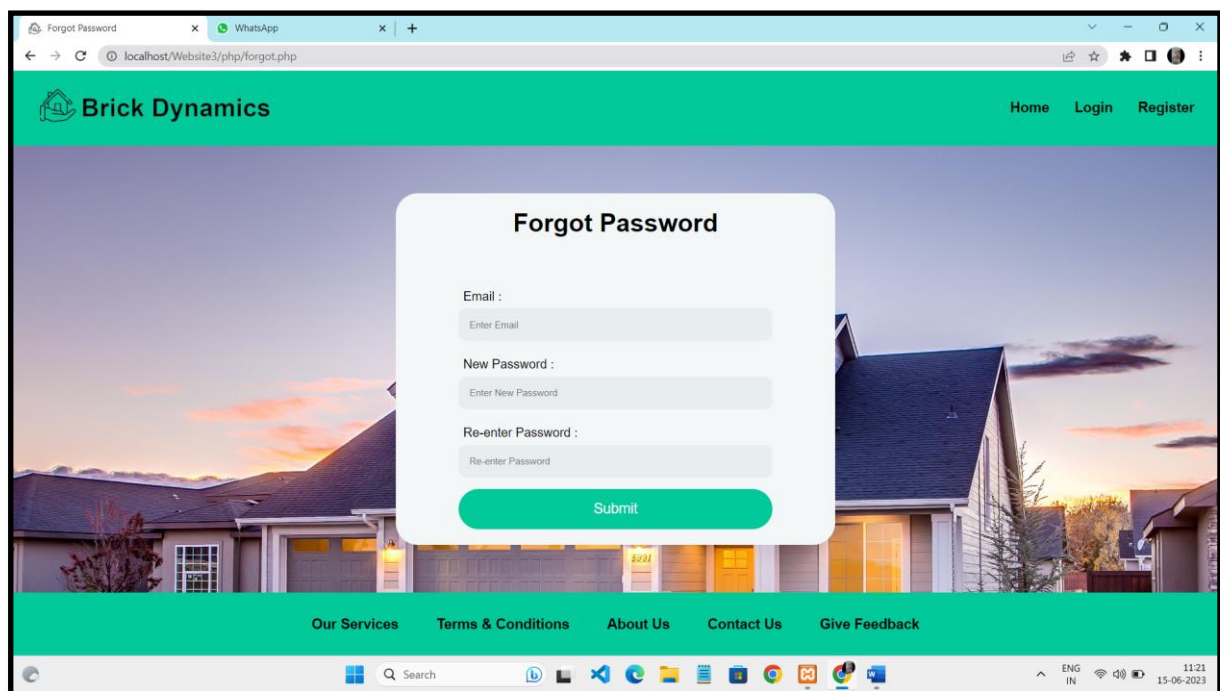

3.1.3 REGISTER PAGE

The screenshot shows a web browser window with the URL `localhost/Website3/php/register.php`. The page features a green header with the "Brick Dynamics" logo and navigation links for "Home" and "Login". The background is a scenic image of a house by a lake at dusk. A white registration form is centered on the page, titled "Registration". It contains the following fields: "First Name" (with placeholder "Enter First Name"), "Last Name" (with placeholder "Enter Last Name"), "Email" (with placeholder "Enter Email"), "Contact No" (with placeholder "Enter Contact Number"), "Password" (with placeholder "Create Password"), and "Re-Enter Password" (with placeholder "Re-enter Password"). A green "Register" button is at the bottom of the form, and a link "Already have an account? Login" is below it. A green footer contains links for "Our Services", "Terms & Conditions", "About Us", "Contact Us", and "Give Feedback". The Windows taskbar at the bottom shows the time as 11:20 on 15-06-2023.

Fig 3.5 Register Page

3.1.4 FORGOT PASSWORD PAGE

The screenshot shows a web browser window with the URL `localhost/Website3/php/forgot.php`. The page features a green header with the "Brick Dynamics" logo and navigation links for "Home", "Login", and "Register". The background is a scenic image of a house at sunset. A white "Forgot Password" form is centered on the page. It contains the following fields: "Email" (with placeholder "Enter Email"), "New Password" (with placeholder "Enter New Password"), and "Re-enter Password" (with placeholder "Re-enter Password"). A green "Submit" button is at the bottom of the form. A green footer contains links for "Our Services", "Terms & Conditions", "About Us", "Contact Us", and "Give Feedback". The Windows taskbar at the bottom shows the time as 11:21 on 15-06-2023.

Fig 3.6 Forgot Password Page

3.1.5 POST REQUEST PAGE

The screenshot shows the 'Request For Post' page in a web browser. The page has a green header with the 'Brick Dynamics' logo and a 'Home' link. The main content area is a white form titled 'Request For Post'. The form is divided into two columns. The left column contains fields for 'I'm looking to:' (radio buttons for 'Sell' and 'Rent'), 'Category:' (dropdown), 'Age Of Property:' (text input), 'Address:' (text input), 'Price:' (text input), 'Bedroom:' (text input), and 'Bathroom:' (text input). The right column contains fields for 'Which kind of Property?' (radio buttons for 'Residential' and 'Commercial'), 'Furnished:' (dropdown), 'Covered Area:' (text input), 'Area:' (dropdown), 'Pincode:' (text input), 'Additional Features:' (text input), 'Select Images of Property:' (text input with an 'Upload Image' button), and 'Property Status:' (dropdown). The form is set against a background image of a lake and palm trees.

Fig 3.7 Post Request Page (1)

The screenshot shows the 'Request For Post' page in a web browser, displaying the bottom section of the form. The form is identical to the one in Fig 3.7, but it includes a large green 'Submit' button at the bottom. Below the form, there is a green navigation bar with links for 'Our Services', 'Terms & Conditions', 'About Us', 'Contact Us', and 'Give Feedback'. The browser's address bar shows the URL 'localhost/website3/php/req_post.php'. The system tray at the bottom right shows the time '12:17' and date '15-06-2023'.

3.2 ADVANTAGES & DISADVANTAGES

Advantage:-

- Main Advantage of our Web Application is that “you can directly deal with the owner of property without paying any brokerage.”
- We cannot Login without Email Verification.
- In this one user can buy and sell their property , it means there are no requirement of making different accounts as a seller or buyer so, no need to register yourself with different categories .

Disadvantage:-

- Our website is only an interface for the user so user neither interact with the property owner nor able to do payment of property directly through the website.

3.3 FUTURE ENHANCEMENT

- We are going to make an update in future by expanding this web application for all over India.
- We can add the live location of properties so user can easily reach their or can see the exact location.
- We are going to try and make the chat boat to make easy communication between seller and buyer.
- At this moment , we are providing to post advertisement of property to free but in future we take charges for advertisement of property.

3.4 FEATURES OF PROJECT

- The user will save time of visiting to different agents for buying a property.
- Easy and fast retrieve information.
- Very easy and user friendly
- Everything will be transparent so that user can trust our web application.
- User can easily communicate with owner of property without paying any brokerage.

3.5 CONCLUSION

- Proposed system is a web application which will avoid user's time from wasting for searching perfect properties.
- We will provide all easy ways to access the application & provide updated for their comfort. Through Brick Dynamic's user can access all the data on their fingertips.
